

EXEC SECURITY
TSCM TECHNICAL SERVICES

ARE YOU PREPARED FOR A PRIVACY **SECURITY BREACH?**

Executive protection teams face a variety of threats in order to protect their principals and clients. Many of these threats can be highly technical in nature. Confidential information and privacy are put in jeopardy from advanced spying technology available to all adversaries. Deploying technical surveillance countermeasures is necessary to ensure that complete security is provided for your principal.

Technical surveillance countermeasures (TSCM), often referred to as bug sweeps, is the electronic and physical inspection of confidential areas and communications systems in order to detect and eliminate eavesdropping and surveillance threats. Professional TSCM requires a thorough knowledge of data and communication system design, understanding infrastructure vulnerabilities, as well as experience working in corporate environments.

Communications and information security is a challenging field that requires well trained personnel and advanced electronic detection equipment. As technology advances, it is imperative that security keeps up to date to be able to counter all threats.

Exec Security provides the professional and technical security solution needed for executive protection concerns. We are TSCM specialists who will serve as an extension to your team. We will interface with your organization to provide custom services that are discrete and confidential. We can give you the confidence that you are providing the best technical security for your clients.

Be proactive in privacy defense! Contact us today to discuss your needs and how Exec Security TSCM will enhance your security program.
